

# 11 Essentials To Consider When Buying A New Phone

You need a brand new smartphone and you can't afford to wait for long. You have checked infinite makes & models to find the best device but too confused to select one. Furthermore, you have no idea about the essential factors to keep in mind before spending your money in just any phone. How to burst this bubble of dilemmas? Well, instead of worrying, check out the 11 major things that will make you the owner of a smart and quality phone.

## 1. Display

If you are someone who edits photos, watch movies or stream videos, you need display that ranges from 5.5-inch to 6-inch and has HD or QHD resolution. Display larger than 6-inch, is bulky and makes it difficult to carry the phone.

## 2. Processor

Qualcomm Snapdragon 652 or Snapdragon 820/821 is apt for you if you edit documents online, play heavy games, edit videos & images and last but not the least, use apps in split screen mode. However, if you are limited on the usage part, MediaTek processors are fine.

### **3. Camera**

For the photography enthusiast, camera with 12 or 16MP sensor under f/2.0 or lower aperture is great to capture shots even when the lights are low. On the other hand are the casual people who are cool with an 8MP or 12MP camera with f/2.0-f/2.2 aperture.

### **4. Battery**

3500mAH battery or above is undeniably important for users who play games, work on apps, stream videos, etc. Moving on to an average user, 3000mAh battery is enough to last for a full day.

### **5. Availability of Spare Parts**

This factor is one of the major things to look; however, is ignored by most of the buyers. Every phone faces issues sooner or later and therefore, availability of genuine [mobile spare parts](#) nearby or easily is a must to check.

### **6. Storage**

When apps on the device are limited, 32GB storage should be the ideal choice. However, to store too many apps, considerable options include 64GB or 128GB variants. Another way out is buying a 16GB model that is compatible with a microSD card.

### **7. Audio/speakers**

Speakers and quality of audio they produce is important than everything for those who are busy with video conferences or heavy video streaming. Phones with front-facing speakers are simply perfect to stay connected with entertainment-on-the-go. Speakers at the back or bottom-firing speakers should be considered if video conferencing and streaming are rare.

### **8. Service Center**

Just like spare parts, having a reliable and established [cell phone service center](#) is important too. Giving the phone in wrong hands or visiting local mobile repair shops leads to serious consequences, which sometimes damages the device permanently. Available of a dependable phone repair service center saves not just the phone but time and efforts too.

## 9. Operating System

When buying iPhone over Android, there's one advantage and that's getting the latest version of iOS. But as this isn't always the case with Android phones, being careful update the latest version is a smart move.

## 10. Security features

Data security is crucial these days, as one mistake can cause havoc. Phones with security features like iris scanner or finger print scanner safeguard the safety level. Besides enabling to lock/unlock the phone, these additional features also protect important files and documents that are stored in the phone.

## 11. Durability

Using glass phones is a risky matter, especially for those who are prone of dropping their mobiles often. Water resistant device saves from the damage of water incidents. To increase the protection further, checking build of the phone is vital too, as some mobiles have plastic body, which doesn't survive long.

So, these are the 11 things to check when on the spree of buying a new phone. To summarize things in a go, consider these points along with 'warranty & guarantee.'
